

Winteq Contract Management System (CMS)

Winteq Contract Management System (CMS) is an application designed for Project Accounting. Written in C++ programming language, it is an application designed for Windows operating system. CMS integrates with “Enterprise” WMS Warehouse Management (WMS), and Financial Accounting System (FAS) products, and can see all transactions and orders processed with the WMS. CMS utilizes Microsoft SQL Server database management system as the back-end data depository, and Crystal Reports engine for reports viewing and printing.

Winteq Contract Management System (CMS) Component Diagram:

Winteq CMS has 2 components. 1) Enterprise-DB is SQL Server database back-end data depository; 2) CMS which is a user-friendly Contract Management System application to manage Contracts/Projects from project start to project completion; tracking all RFIs, Estimates, Submittals, Change Orders, Project Notes, Costs of material and labor, Equipment Rentals, Special Billings and Invoices.

Contract Management System (CMS)

The following is a list of Contract Management System (CMS) features:

Core Features

- Project Setup and Tracking
- Project Costs
- Project Invoices
- Project Financial Reports
- Project RFIs, Submittals, Notes
- Project Change Orders
- Project Special Billings
- Project Trade Unions

Services and Support

Winteq provides a full suite of services to augment system implementation. These services are:

- Requirements Study
- Hardware Specification
- Project Implementation
- Maintenance and Support
- Technical User Training
- Full System Documentation
- Warranty, Updates, and Upgrades
- Phone and on-site support

System Specification

Winteq's Financial Accounting System (FAS) is built to run on Microsoft Windows Server Operating System and Windows Client PCs. Proven technologies such as C++ Programming language, ODBC, and Crystal Reports engine has been used to develop CMS. The design criteria used for the development of CMS were a) client/server technology, b) distributed computing, c) object oriented programming, d) high performance transaction processing, and e) user friendliness.

About Winteq (The Win-Win Company)

Winteq was founded in 1997 to design and develop Enterprise business software. Winteq has extensive experience in Product Design, Software Engineering, Project Management and Implementation, C++ and SQL Server Development, and System Implementations. Our experiences have provided us with the knowledge of what really works. Our software was designed and developed based on this experience and technical knowledge. The simplicity, power, and user friendliness of Winteq software is un-matched in the industry. Winteq believes in a Win-Win philosophy of partnering with the customer and will not perform work if it does not result in a Win-Win for both customer and Winteq. Winteq's commitment to customer is un-matched. For more information visit us at www.winteq.com or send email to sales@winteq.com.
